Dear Future Tech Team Member,

As we near the end of our project I felt it would be best to touch base on our accomplishments thus far. We have come a long way, and although there have been a few bumps along the way, there are only a few more steps to take before the project is officially concluded.

As mentioned in our last review email, there were some deferments with the network hardware deliveries due to the holiday season; however, the network engineer was able to complete all network related installations with only minor delays. Once connected, special steps were taken to ensure the appropriate connectivity could be achieved in the most secure manner. The router was set up to provide extra security to network users with minimal interference in addition to being divided up into virtual local area networks based on department.

Systematic testing was completed after all configurations were made to ensure the network functions appropriately and securely. The network was tested for coverage, upload and download speeds, accessibility, port security, failure recovery, and hackability. During the testing of failure recovery, it was determined that the speeds purchased from the secondary internet service provider may need to be increased; however, at this time the speeds are considered acceptable being that it is merely the back up.

After all testing was concluded the employees resumed operations as normal effective January 7th, 2019. To date there have been no issues reported; although, employees have been informed of the process to do so. In the coming week, you can expect to see the final status report to provide more detail along with the lessons learned documents. It is recommended to read the lessons learned documents thoroughly so that the organization as a whole can grow and continue improving Future Tech.

If you have any questions regarding this email, or any other inquiries, please feel free to respond to this email or contact Mrs. Ainslie at the information shared in the header.

Warm regards,
Future Tech Project Manager

Felicia Ainslie
