Dear Future Tech Team Member,

I am happy to report that the Future Tech Network project has now been concluded. The purpose of this email is to congratulate our team on their efforts, in addition to summarizing what has been done over these last few months.

All vendor contracts have now been completed and closed out along with the documentation to describe how the project went while working with them. The network has been thoroughly tested and is fully functional for all Future Tech employees to utilize. Prior to the launch of the network all Future Tech employees had submitted their device contracts signed to relay to the organization they fully understand the do's and don'ts of the new network.

Our new network consists of 80 dell laptops, 420 dell desktops, 3 PowerEdge T440 Tower Servers, 16 Netgear switches, 15 Linksys wireless access points, 2 Netgear routers, and 2 Arris stand-alone modems. The software installed on the computers includes Salesforce, Microsoft Office 365, Pidgin, TeamViewer, Avast, Paycom, and Basecamp. Our primary internet service provider is providing Future Tech with 30Mb upload and 10Mb download speeds per user, which allows our employees to continue working to improve our organization. We do have a second provider in the event our primary provider is down that provides 20 Mb upload and 5Mb download per user. It is currently being discussed if these speeds need to be increased; however, as mentioned in the last email, it is not seen as necessary at this time.

If you have any questions regarding this email, or any other inquiries, please feel free to respond to this email or contact Mrs. Ainslie at the information shared in the header.

Congratulations team, you did it!

Warm regards,
Future Tech Project Manager

Felicia Ainslie
